JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– arsenide 327
Ammonium
– nitrate 396
Apparatus
– for atomic layer deposition
– – of titanium dioxide (rutile) 268
– for monitoring interfacial morphologies 289

Boron
– nitride 232

Cadmium
– telluride 236
– zinc telluride 49, 56, 236
Calcium
– carbonate 297
Carbon
– bromate/dicarbon tetrachloride 406
Cellular growth
– of neodymium doped yttrium aluminum garnet 345
Characterization
– by Kato's statistical theory of X-ray
– – of indium gallium arsenide 31
Computer simulation
– of gallium arsenide
– – by Monte Carlo simulation 96
– of silicon melt convection 70
Constitutional supercooling
– of neodymium doped yttrium aluminum garnet 345
Convection 70
Copper
– delafossite 189

Dendritic growth
– of ammonium nitrate 396
– theory of strongly interacting needle crystals 305
Device characterization
– acousto-optical 148
– diodes 25
– electronic materials 1, 336
– heterojunction 25
– lasers 219, 345
Diamond 110, 248, 355, 365
Diffusional control
– of growth 49, 421
– of (self) cadmium 236
– of surface morphology 133
Diodes, see Device characterization
Dissolution
– of synthetic hydroxyapatite 201

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Eutectic growth
– of carbon bromate/dicarbon tetrachloride 406

Forsterite
– chromium doped 140

Gallium
– aluminum arsenide 219
– arsenide 8, 17, 35, 79, 96, 211, 219, 327
– indium phosphide 211

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– antimonide 183
– arsenide antimonide 25
– gallium aluminum phosphide 13
– gallium arsenide 1
– phosphide 17
Iron
– gallium arsenide 261

Kinetics
– of growth 25, 172, 201, 211, 241, 268, 289, 297, 421
– of interface control 165, 172, 289, 415
– of massive phase transformations 165
– of nucleation 276, 297, 421

Lasers, see Device characterization
Lasers, crystals for
– chromium doped forsterite 140
– neodymium yttrium aluminum borate 207
– potassium diphosphate 276

Lead
– molybdenum oxide 148
Lithium
– niobate 324
– sodium monosulphate 283
– sodium sulphate 283
Lysozyme 289

Melt growth technique
– by Czochralski method
– – of gallium arsenide 79
– – of lead molybdenum oxide 148
– – of neodymium doped yttrium aluminum garnet 345
– – theory of process dynamics 79
– by floating zone method
– – of chromium doped forsterite 140
– – of copper–delafossite 189
– by uniaxial solidification
– – of indium antimonide 183
Mercury
– cadmium telluride 41
– iodide 125
Morphological stability
– of diamond faces 248
– of lysozyme crystals 289

Neodymium
– doped yttrium aluminum garnet 345
– yttrium aluminum borate 207
Nucleation
– of indium droplets on gallium arsenide 8
Numbers
– Peclet 305

Phase diagrams
– of lead molybdenum oxide single crystal 148
– of mercury cadmium telluride 41
Potassium
– diphosphate 276
Precursor
– for architectural forms 436
– for carbon doping in indium gallium arsenide 1
– for lithium niobate 324
– for silicon carbide 383, 390
– sensor for detection of 63
Purification of materials
– of L-isoleucine 197

Silicon 70
– arsine alloys 172
– carbide 116, 383, 390
– oxide 336
Solid growth technique
– by polymorphic transformation 165
– theory of interface migration 165
Solution growth technique
– by flux method
– – of neodymium yttrium aluminum borate 207
– – of yttrium ortho-vanadate 193
– by gas anti-solvent recrystallization
– – of L-isoleucine 197
– – theory of interfacial morphologies 289
– by gel method
– – of beta-lithium sodium sulphate 283
– – of calcium carbonate 297
– – of lithium sodium monosulphate 283
– by hydrothermal growth
– – of synthetic hydroxyapatite 201
– by low temperature method
– – of ammonium nitrate 396
– – of deuterated potassium diphosphate 276
– – of N-(3-pyridyl)-2-thiophene sulphonamide 436
– – of N-2-(3-methyl-pyridyl)-bis-2-thiophene carboxamide 436
– – of potassium diphosphate 276
– by top seeded solution
– – of YBCO 241
Stefan problem or moving boundary problem 305
Superconductivity materials, high T_c
– bulk
– – of LSYCCO 106
– – of YBCO 241
– film
– – of YBCO 155
Superlattices, multilayers
– of III–V compounds 327
– structural determination
– – by high resolution X-rays 327
Surface energy, determination
– of potassium diphosphate 276
Surface structure
– of boron doped diamond 110
– of flame grown diamond 248
– of silicon carbide 116
– of YBCO 241

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of titanium dioxide (rutile) 268
– – of zinc sulphide 223
– by chemical beam epitaxy
– – of gallium arsenide 211
– – of gallium indium phosphide 211
– by liquid phase epitaxy
– – of beta-lithium sodium sulphate 283
– – of gallium arsenide 17
– – of indium phosphide 17
– – of mercury cadmium telluride 41
– – of silicon–arsine alloys 172
– – of zinc selenide 432
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide 1
– by molecular beam epitaxy
– – of aluminum arsenide 327
– – of cadmium telluride 236
– – of cadmium zinc telluride 236

– – of calcium fluoride 133
– – of gallium arsenide 8, 35, 327
– – of silicon oxide 336
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 110, 248, 355, 365
– – – of silicon carbide 116
– – through metalorganic chemical vapor deposition
– – – of indium arsenide antimonide 25
– – – of indium gallium aluminum phosphide 13
– – – of indium gallium arsenide 31
– – – of iron gallium arsenide 261
– – – of lithium niobate 324
– – – of silicon carbide 383, 390
– – – of titanium dioxide (rutile) 268
– – through plasma
– – – of boron nitride 232
– – – theory of surface stabilization 248
Titanium
– dioxide (rutile) 268
Vapor growth technique
– by chemical transport
– – theory of diffusive mass transport 49
– by evaporation and condensation
– – of alpha-mercuric iodide 125
– – of YBCO 155
– – theory of sputter deposition 155
– by physical vapor transport
– – of cadmium zinc telluride 49, 56

Yttrium
– ortho-vanadate 193

Zinc
– cadmium telluride 236
– selenide 432
– sulphide 223
